(54) Title: EXHALATION SYSTEM

(57) Abstract: An exhalation system is provided for a helmet or face mask, which helmet or face mask covers the whole or parts of the area of the face's exhalation organs, the nose and mouth, with a chin guard. The system is characterised in that the chin guard is provided with an internal closed cavity which has an opening towards the interior of the helmet or the face mask on the inside of the chin guard and an additional opening towards the outside of the chin guard. The opening towards the interior of the helmet is relatively large and is in the form of one large opening or a small number of large openings which offer the least possible resistance and maintain the velocity of the exhalation air in the best possible manner.
